

ABSTRACT OF THE DISCLOSURE

5 A resin-coated metal sheet comprising a metal  
substrate and a thermoplastic resin layer formed on the  
surface of the metal substrate, wherein the thermoplastic  
resin layer comprises a polyester consisting chiefly of a  
polyethylene terephthalate and an ethylene polymer, and  
contains an ionomer resin as well as a tocopherol or a  
derivative thereof. The resin-coated metal sheet exhibits  
10 corrosion resistance, shock resistance (dent resistance)  
and resistance against high temperature and humidity, and  
withstands the retort-sterilization and the aging in a hot  
vendor or the like after the retort-sterilization.
